

CASE FILE: OMNI-2026-NOVA // HIGH-RISE HOMICIDE & VEHICULAR FLIGHT

At 1600 hours, authorities breached VIP Parking Level 3 of the Azure Tower luxury residences. The victim, identified as 34-year-old venture capitalist Elena Rostova, was found deceased inside her idling electric vehicle. The primary witness is her business partner, Martin Cross, who called in a welfare check. In his sworn statement, Cross insists he had a brief phone conversation with the victim this morning, claiming she was alive and well at exactly 2026-05-09T10:45:00 before heading to a meeting.

The crime scene forensics unit recorded the ambient subterranean garage temperature at a cool 64.0°F. The core hepatic temperature of the victim was measured at 77.8°F. Physical examination showed maximum rigor mortis across the upper extremities. Curiously, livor mortis was fully fixed in the lower legs and feet, despite the body being discovered horizontally draped across the passenger seats, heavily suggesting the victim was killed while standing and staged in the vehicle hours later. Primary injuries consist of a distinct ligature mark around the neck and petechial hemorrhaging in the eyes, indicating asphyxiation.

Cyber units extracted the victim's biometric smartwatch (BIO_WATCH), which recorded a sudden, permanent cessation of a heart rate at 02:12 AM. The electric vehicle's internal telemetry (EV_SYSTEM) shows the doors were unlocked manually at 02:15 AM. Investigators immediately seized the raw footage from the garage's automated toll-gate camera (CAM_EXIT_04), which monitors the only exit ramp leading out to the main street.
